Apptricity®

Delivering a Logistics Common Operating Picture and Total Asset Accountability

Apptricity has the experience and technological expertise to provide solutions that meet the demands of the congressional mandate and Department of Defense (DoD) directive for accountability of equipment and other assets.

A global provider of mission-critical mobile technology solutions, Apptricity easily leverages its extensive capabilities in asset management, in-transit visibility (ITV), aviation, logistics support and more to meet the U.S. military's needs.

Apptricity solutions address all accountability requirements and assist with the development of a Common Operating Picture (COP) for the entire range of logistics operations.

Current Challenges and Requirements

U.S. military inventory and transportation management systems often lack the COP that is so critical for rapid deployment, management and measurement. Inadequate systems can result in misplaced equipment, inaccurate tracking and poor accountability. Apptricity solutions can significantly enhance military logistical and aviation planning and execution.

Logistics Support Solution Suite

In addition to 24/7 availability via a Web browser, Apptricity's Web-based solutions provide ready access from any authorized mobile device. The unified, intuitive interface makes it easy to manage and track assets, transportation routes and more.

Every military branch can automate operations across its entire supply chain using Apptricity Supply Chain Management, an advanced mobile enterprise solution suite. Delivering unprecedented insight, control and 360-degree visibility, the suite streamlines logistics and enables effective management of the complex supply cycles involved in asset tracking, inventory management, transportation management, aviation operations and more.

Apptricity solutions are commercial off-the-shelf (COTS) applications that can be deployed individually or integrated in any combination to deliver critical capabilities:

- Asset tracking
- Inventory management
- Transportation management
- Warehouse management
- Work order management

In addition to the above solutions, Apptricity provides a dynamic aviation operations support solution that has been procured by the U.S. Army. This solution, Apptricity Transportation Management System – Air, may be immediately deployed to deliver specially configured capabilities.

Aviation Operations

Referred to by the DoD as Air Movement Request (AMR), Apptricity Transportation Management System – Air is a combat-proven system for rotary and fixed-wing air transportation that tracks transportation requests, flights, passengers and cargo for military aviation operations. The AMR solution provides continuous monitoring of passengers, cargo and aircraft. The solution also delivers workflow management for air transportation requests from creation, submission, and approval or denial through various chain-of-command levels as defined by the theater business process.

System Integration & Enterprise-Wide Availability

Integration with existing technology infrastructure and legacy systems helps minimize costs while supporting comprehensive, enterprise-wide asset and operations visibility. Consisting of Web-based solutions, the Apptricity system provides full compatibility with the Secure Internet Protocol Router Network (SIPRNet) and Nonsecure Internet Protocol Router Network (NIPRNet) for classified or unclassified data. Apptricity solutions have been hosted in an Army Data Center.

Five Tenets of Apptricity Solution Development

Apptricity designs and develops its solutions for convenience, cost-effectiveness and rapid deployment:

- Adaptable applications
- Unrestricted configuration
- Scalable systems
- Superior integration
- Minimal-cost migration

Proven Successes

Apptricity has an outstanding track record of successful deployments in both the commercial and government sectors:

- AT&T® Inc.
- Walmart®
- Nestle® S.A.
- Lone Star Instrumentation
  & Electric Corporation
- Goldman Sachs®
- Cameron International Corporation
- Merit Integrated Logistics
- NASA®
- U.S. Army
- U.S. Air Force
- Honeywell®/Afghan Air Support

End-to-End System for Accountability & COP

Apptricity Government Services provides enterprise supply chain and financial management applications for national security and military sectors using a specialized cloud-based architecture that is "Above the Cloud" with Apptricity jetstream™. Through proven systems currently used by the U.S. Army, Apptricity has demonstrated its ability to meet the military's needs for total asset accountability and management. Apptricity solutions — including comprehensive asset tracking, ITV for assets and personnel, extensive aviation operations support and more — help to establish the essential logistics COP military leaders require and deserve.

Contract Vehicles

To procure Apptricity solutions, the DoD may utilize Apptricity's established GSA Schedule 70. The following details are useful when planning Apptricity implementations:

- GSA Schedule Number: GS-35F-0403T
- Deployment timeframe: 6 to 12 weeks
- Implementation and configuration costs

To begin implementing the U.S. Army-owned licenses in whole or in part, DoD branches may engage Apptricity in conjunction with Army Contracting Command to expedite the implementation process and qualify associated costs. Apptricity can then configure the selected solutions if needed by adjusting user profiles and setting up the preferred business rules.
