Classroom Training Tidbits

Some interesting variations used in classroom training

- **Blackboard or whiteboard.** This may be the most "old-fashioned" method, but it can still be effective, especially if you invite trainees to write on the board or ask for feedback that you write on the board.

- **Video portion.** Lectures can be broken up with video portions that explain sections of the training topic or that present case studies for discussion.

- **PowerPoint® presentation.** Training materials are displayed on a large screen for any number of trainees. This method is one of the most popular lecture methods and can be combined with handouts and other interactive methods

- **Storytelling.** Stories can be used as examples of right and wrong ways to perform skills with the outcome of each way described.

This Quarter Focuses on Asset Management

Does your organization need comprehensive enterprise-wide software to track, maintain and evaluate all your assets? This critical data helps you make solid purchasing, scheduling, useful-life and salvaging decision needs at your fingertips.

Benefits of Radio Frequency ID Tags?

Apptricity's Asset Management integrates RFID technology so you can communicate with multiple assets simultaneously, no longer having to spend the time individually scanning items! Instantly locate all of your assets and track their movement.

Why Apptricity Asset Management?

- **Purchase and Track** your assets using RFID and barcodes
- **Assign and Monitor** the location and relocation of your assets, gaining visibility and accountability. Get the complete chain of custody – know where your assets were and who had them.
- **Manage and Repair** assets by tying into Apptricity's Work Order Mgmt system and scheduling necessary maintenance all in one place.
- **Relate Assets** to tie them together for ease of maintenance and relocation.

Apptricity Asset Management

Our solution manages the entire asset lifecycle, which includes monitoring unused and assigned equipment. The system also tracks service contracts and maintenance schedules to lower the total cost of ownership by eliminating manual processes. Depreciation models are simplified through the system's valuation capabilities. Using Radio Frequency Identification (RFID) or barcode labels, you can accurately account for all assets across each facility and gain immediate access to the procurement-to-retirement lifecycle using real-time data available through any Web browser.
